

# Y Combinator Startups Report

Generated: 2/5/2026 | Total: 30 companies

## Martini

Batch: Winter 2026 | Industry: B2B | Status: Active

<https://martini.film>

### Description:

Collaborative AI-native filmmaking for professionals. Founded in 2025 by Long Hoang and Koh Terai, Martini has 2 employees based in San Francisco, CA, USA.

### Details:

Founders (3):

1. Long Hoang
2. Koh Terai
3. Martini

# Condor Energy

Batch: Winter 2026 | Industry: Industrials | Status: Active

## Description:

Energy system enabling reliable, cheap and sustainable electricity... Founded in 2026 by Jean Costa de Beauregard, Clément Grivel, and Florian Pérocheau, Condor Energy has 3 employees based in .

## Details:

Founders (4):

1. Jean Costa de Beauregard
2. Clément Grivel
3. Florian Pérocheau
4. Condor Energy

# Zymbly

Batch: Winter 2026 | Industry: B2B | Status: Active

<https://www.zymbly.com>

## Description:

Automates admin for aircraft technicians. Founded in by Robbie Bourke, Azmat Habibullah, and Ben Jacob, Zymbly has 0 employees based in .

## Details:

Links:

linkedin: <https://www.linkedin.com/school/y-combinator/>

twitter: <https://twitter.com/ycombinator>

Tags: . He's also a competitive weightlifter and aspiring polyglot. Azmat Habibullah Founder Azmat is co-founder and CTO of Zymbly. He holds a Master's in Mathematics from Imperial College London, where his research focused on the geometry of quantum mechanics. He started hacking at the age of 11 and spent 4 years building ML models and software for enterprises in highly regulated industries. He's also a competitive weightlifter and aspiring polyglot. Ben Jacob Founder Ben is the co-founder and CEO of Zymbly. Before Zymbly, Ben led Applied AI at Multiverse (backed by GV, General Catalyst, and Index). Ben started his career working with airlines on operational improvement. He worked with one of the world's largest airlines to recover their operations after the pandemic. Ben Jacob Founder Ben is the co-founder and CEO of Zymbly. Before Zymbly, Ben led Applied AI at Multiverse (backed by GV, General Catalyst, and Index). Ben started his career working with airlines on operational improvement. He worked with one of the world's largest airlines to recover their operations after the pandemic. Company Launches Zymbly: The Copilot for Aircraft Maintenance See original launch post Ben, Azmat, and Robbie here; co-founders of Zymbly (YC W26). Zymbly doubles productivity for aircraft technicians with AI. Our agents automate troubleshooting and paperwork. Technicians get to spend their time doing the work they actually signed up for; maintaining planes. <https://www.youtube.com/watch?v=zlu5lhcfceA> The Problem: Airlines have a maintenance capacity bottleneck. It is holding back growth. In North America alone, there is a shortage of 43,000 technicians forecast by 2027 (25% shortfall). Boeing estimates 710,000 new technicians are needed in the next 20 years. Technicians are their most precious resource. Yet, technicians lose half their day to: Troubleshooting: finding the information needed to fix issues and replace parts can take hours as the information is spread across tens of thousands of pages. Paperwork: Any work that is performed needs to be rigorously documented according to pre-defined standards We hear "It takes me 5 mins to change a bulb, but 45 minutes to do the paperwork" and similar sentiments every day. How Zymbly Solves It: Zymbly's voice-first agents surface answers across manuals, local procedures and historical defects. Zymbly surfaces the right solutions and orders the correct parts. It turns voice notes into compliant documentation and audits actions to ensure technicians haven't missed critical steps. Who We Serve: Our customers are maintenance teams either inside airlines, or working for airlines. Our users are the technicians who keep your planes safe. They prefer to spend their time working on the aircraft, not on admin. We've developed our platform through a design partnership with a major global airline. About Us: Robbie Bourke was Head of Maintenance at Virgin Atlantic and a lead engineer at Airbus. Ben Jacob worked with airlines to recover their operations post-pandemic and led Applied AI at Multiverse (backed by GV/GC/Index). Azmat Habibullah combines hacking from age 11 with building enterprise software in regulated industries. Our Ask: If you work in aviation maintenance or know someone who does we would love to get connected! Prev. @ Microsoft Research focused on training language models. Graduated from IIT Bombay with Btech + Mtech in Electrical+AI. Published @ Neurips, ACL, Interspeech.Company LaunchesRitivel Ø=ÜŠ AI-native platform for Regulatory Document SubmissionSee original launch postHey everyone Ø=ÜK We're Pavan (PK), Gunin and Nimit – co-founders of Ritivel. TL;DR Ritivel is an AI-native workspace for regulatory and medical writing teams at life sciences companies. Our AI agents draft CTDs, CSRs, INDs, and BLAs in minutes instead of weeks, helping drugs reach patients faster. Ask: Can you introduce us to regulatory affairs leaders or CISOs at pharma companies? Contact us at [pavan@ritivel.com](mailto:pavan@ritivel.com) [https://youtu.be/VrqJtPDy\\_do](https://youtu.be/VrqJtPDy_do) 'L The Problem Every month a drug is delayed from reaching the market costs pharma companies ~\$45M in lost revenue and more importantly, delays treatment for thousands of patients who need it. Yet regulatory teams are stuck in a painful, months-long process to create FDA submissions like CTDs, CSRs, INDs, and BLAs: 1. Information overload Ø=ÜÚ These submissions require synthesizing thousands of pages of clinical data, prior submissions, and regulatory guidance which is an overwhelming task even for experienced teams. 2. Document hunting & version chaos Ø=Ý Teams waste hours digging through SharePoint folders, juggling multiple document versions, and chasing colleagues for the right files. 3. Endless follow-ups Ø=ÜÇ Regulatory leads spend their days sending reminder emails, tracking down missing inputs, and managing status updates across teams. 4. Manual drafting bottlenecks #ó Even with all the information gathered, the first draft alone takes weeks of painstaking work by highly specialized (and expensive) regulatory writers. Ø=Ý' Our Solution Ritivel deploys AI agents that transform how regulatory teams work: Draft the most common document types like CTDs, CSRs, INDs, and BLAs in minutes ' þ Our agents generate comprehensive first drafts directly in Microsoft Word, following FDA formatting requirements and pulling from your existing clinical data and prior submissions. Every data point includes citations linked back to the original source, so reviewers can verify with one click. Intelligent document retrieval Ø=Ý Connected to SharePoint and Veeva, our agents automatically source the right documents from across your organization: no more digging through folders or chasing down files. Automated follow-ups Ø=ÜÇ Integrated with Outlook, our agents handle reminder emails and follow-ups automatically, so you're not stuck chasing colleagues for missing documents. Accelerated project management Ø=Þ€ By automating the document gathering and drafting loop, teams can focus on review and refinement rather than administrative overhead. Ø=ÜI The Team We're engineers who previously built AI copilots at Microsoft Research. We saw firsthand that we could create better, more specialized copilots for complex workflows. We started by selling a generic copilot to process-heavy industries like life sciences to understand their regulatory workflows. After 50+ conversations with pharma professionals, we discovered the critical bottleneck in regulatory submissions and built Ritivel to solve it. Ø=ÞO Our Ask Know someone in pharma regulatory affairs? We'd love an intro to regulatory affairs leaders or CISOs at pharma companies !' founders@ritivel.com Work at a life sciences company? Try Ritivel and see the difference !' [www.ritivel.com](http://www.ritivel.com) Your intro could help get life-saving drugs to patients faster. Thank you! Tags: like financial services and fintech, healthcare, and insurance. On-call engineers in these industries need to inspect data to debug production issues. We monitor both data and infrastructure for issues and use AI agents to debug and suggest fixes in minutes. Data is especially sensitive in regulated industries, so we offer on-prem deployments and hardware-backed secure environments that let agents safely use production data as context while debugging. Mitch and Shipra founded Corelayer after building data infrastructure together at Goldman Sachs, where they spent many late nights and weekends debugging systems that processed 100s of billions of rows a day. Active Founders Shipra Jha FounderCo-Founder & CTO @ Corelayer | Building the AI-native operations layer for production software and data systems. Prev: software + data infra @ Goldman Sachs, cloud infra @ Oracle, CS @ CMU Shipra Jha FounderCo-Founder & CTO @ Corelayer | Building the AI-native operations layer for production software and data systems. Prev: software + data infra @ Goldman Sachs, cloud infra @ Oracle, CS @ CMU Mitch Radhuber FounderCo-Founder & CEO @ Corelayer | Building the AI-native operations layer for production software and data systems. Prev: software + data infra @ Goldman Sachs, CS @ UMich, astrophysics research @ Princeton Mitch Radhuber FounderCo-Founder & CEO @ Corelayer | Building the AI-native operations layer for production software and data systems. Prev: software + data infra @ Goldman Sachs, CS @ UMich, astrophysics research @ Princeton Company Launches Corelayer: AI on-call engineer for data pipelines See original launch post Hey everyone! Ø=ÜK We're Mitch and Shipra - before Corelayer, we built data infrastructure at Goldman Sachs where we spent many late nights and weekends debugging systems that processed 100s of billions of rows a day. TL;DR When you're on call in data-heavy industries like fintech, healthcare, or insurance, you need to inspect data to debug production issues. We built a platform that monitors both data and infrastructure for anomalies and uses AI agents to debug and suggest fixes in minutes. Corelayer Launch Video On-call support is painful and expensive All engineers hate being on call. Production issues kill velocity, erode user trust, and become more and more costly as companies scale. Fortune 100s spend \$100M+/year on first-line-of-defense production support. Smaller companies can't afford to burn scarce engineering resources on time-consuming support and maintenance. The (sensitive) data problem If you're a backend engineer at a fintech, you probably own a service that queries data, applies some business logic, and stores the result somewhere (i.e., a data pipeline). When this service is running in production, you'll see two failure modes: Exceptions in logs and/or failing jobs Bad data produced by your service "Bad data" can mean anything from incorrect values to entirely missing or duplicated rows. This is really common in certain products and industries, but you're totally blind to these errors without monitoring data for anomalies and querying data while debugging. In regulated environments where this problem is prevalent, production data is sensitive, which is another constraint we have to solve for. Corelayer solves this We continuously monitor logs, metrics, and data for anomalies and use AI agents to debug, root-cause, and suggest fixes for issues. We also filter out false positives and group related issues to reduce alert noise. Every team is different. We take feedback from human engineers so our agents learn your systems and improve over time. Data is especially sensitive in regulated industries. We're SOC 2 compliant, offer on-prem deployments and confidential compute (hardware-backed secure environments), and expose an audit trail of each step performed by the agent with citations. Our Asks Does your team deal with data or integrations and spend more time on production support than you'd like? Let's chat. Can you connect us with an engineering leader at a finserv, fintech, healthcare, or insurance company? Reach out at [founders@corelayer.com](mailto:founders@corelayer.com). Thank you!
